

ABSTRACT OF THE DISCLOSURE

A surface mounting type coil includes: a coil having windings which are wound around a magnetic core having a hole; a cylindrical magnetic body which is provided around the coil; and a plurality
5 of metal plate terminals which leads of the windings are connected to; the metal plate terminals extending along an outer face of the cylindrical magnetic body from a bottom face to a top face thereof, and being secured to the cylindrical magnetic body in
10 such a manner that tips of the metal plate terminals are within the thickness of the cylindrical magnetic body.
